PROFESSIONAL EXPERIENCE

Schonfeld Strategic Advisors

New York, NY

Senior Software Engineer, Portfolio Management Team

January 2025 – Present

- Own the team's prime broker allocation system end-to-end, routing 3 million daily executions across 8+ prime brokers spanning NA, EMEA, and APAC through 4 core microservices that determine trade routing, communicate allocation decisions to downstream systems, and orchestrate position transfers between brokers
- Architect and implement a new position calculator comprising 8 Java 21 microservices on Kafka and Flink, replacing the team's legacy system with stream-based trade aggregation and manual intervention capabilities while establishing the service architecture to support a downstream in-house valuation platform
- Migrate the team's CI/CD from Jenkins to GitHub Actions targeting Kubernetes, reducing library build times from 5 minutes to 2 and automating deployment workflows with configurable manual gates for production releases
- Build and maintain a shared integrations library and base Dockerfile image used as the foundation for all team services, reducing per-service scaffolding by hundreds of lines for common patterns including Kafka consumer configuration, Avro deserialization, and Spring Boot application bootstrapping

Software Engineer, Portfolio Management Team

July 2021 – December 2024

- Led the implementation of position transfer functionality within the prime broker allocation system, enabling the automated movement of trader positions across 8+ prime brokers and establishing the transfer orchestration capabilities that the system continues to depend on today
- Reduced the team's in-memory securities footprint from 15 GB to 5 GB by engineering a shortlisting system that filters the full universe to actively relevant instruments, a solution adopted across 50+ microservices that continues to hold at 6 GB against a universe now exceeding 22 GB
- Designed and built a trade date calculation system for position dating and settlement determination on incoming executions, eliminating daily manual amendments by Operations caused by incorrect calculations in the prior system
- Mentored two summer interns across consecutive years, scoping projects, leading code reviews, and guiding one through a full initiative from design to production deployment in 2024

Software Engineering Intern, Portfolio Management Team

June 2020 – August 2020

- Implemented a general-purpose, portable search engine using Apache Lucene tailored to the portfolio management team, enabling users to query securities data with case-insensitive and substring matching capabilities
- Contributed to the development lifecycle of 5+ services through unit testing with JUnit, deployment to test and production environments using Jenkins and Docker, and technical documentation in Confluence

EDUCATION

Columbia University

New York, NY

Master of Science in Computer Science, Machine Learning Track

Expected December 2026

- **Relevant Coursework:** Applied Machine Learning in Cloud, LLM-Based Generative AI, Agentic AI and Data Economy
- **GPA:** 4.00 / 4.00

Rutgers University – Honors College

New Brunswick, NJ

Bachelor of Science in Computer Science and Business Analytics & Information Technology

May 2021

- **Honors:** Dean's List (all semesters), Beta Gamma Sigma (top 10% of Business School), Presidential Scholar
- **GPA:** 3.93 / 4.00

SKILLS

Languages & Frameworks: Java, Spring Boot, Maven, Avro, Python, TypeScript, React, Next.js, PostgreSQL, Bash

Infrastructure & Tools: AWS, GCP, Kafka, Kubernetes, Docker, GitHub Actions, Jenkins, Git, Jira, Confluence

AI-Assisted Development: OpenCode, Claude Code, GitHub Copilot CLI

INVOLVEMENT

Big Brothers Big Sisters · Volunteer Mentor

2024 – Present

- Guide high school students through six sessions per school year on preparing for life after graduation, covering higher education pathways, career exploration, and the practical responsibilities of adulthood

Road to Silicon V/Alley Program · Director of Recruiting & Admissions

2019 – 2021

- Recruited annual student cohorts into a Rutgers technology entrepreneurship program, creating the admissions process and connecting selected participants with industry leaders for mentorship and career development
